Section 7.3, problem 6.d Give a formal proof for each of the following tautologies by using the CP rule. Do not use the IP rule.

$$\forall x (p(x) \rightarrow q(x)) \rightarrow (\exists x p(x) \rightarrow \exists x q(x)).$$

Answer:

1.	$\forall x (p(x) \rightarrow q(x))$	P
2.	$\exists x p(x)$	P [for $\exists x p(x) \rightarrow \exists x q(x)$]
3.	$p(x) \rightarrow q(x)$	1, UI
4.	$p(x)$	2, EI
5.	$q(x)$	3, 4, MP
6.	$\exists x q(x)$	5, EG
7.	$\exists x p(x) \rightarrow \exists x q(x)$	2-6, CP
	<i>QED</i>	1, 7, CP

Section 7.3, problem 6.f Give a formal proof for each of the following tautologies by using the CP rule. Do not use the IP rule.

$$\forall x (p(x) \rightarrow q(x)) \rightarrow (\forall x p(x) \rightarrow \forall x q(x)).$$

Answer:

1.	$\forall x (p(x) \rightarrow q(x))$	P
2.	$\forall x p(x)$	P [for $\forall x p(x) \rightarrow \forall x q(x)$]
3.	$p(x) \rightarrow q(x)$	1, UI
4.	$p(x)$	2, UI
5.	$q(x)$	3, 4, MP
6.	$\forall x q(x)$	5, UG
7.	$\forall x p(x) \rightarrow \forall x q(x)$	2-6, CP
	<i>QED</i>	1, 7, CP

Section 7.3, problem 7.c Give a formal proof that each of the following wffs is valid by using the CP rule and by using the IP rule in each proof.

$\exists y \forall x p(x, y) \rightarrow \forall x \exists y p(x, y)$.

Answer:

1.	$\exists y \forall x p(x, y)$	P
2.	$\neg(\forall x \exists y p(x, y))$	$P[\text{for } \forall x \exists y p(x, y)]$
3.	$\exists x \forall y \neg p(x, y)$	2, T
4.	$\forall x p(x, c)$	1, EI
5.	$p(d, c)$	4, UI
6.	$\forall y \neg p(d, y)$	3, EI
7.	$\neg p(d, c)$	6, UI
8.	<i>False</i>	5, 7, Contr
9.	$\forall x \exists y p(x, y)$	2-8, IP
	QED	1, 9, CP

Section 7.3, problem 8.d Transform each informal argument into a formalized wff. Then give a formal proof of the wff.

Every rational number is a real number. There is a rational number. Therefore, there is a real number.

Answer:

Let $D(x)$ mean that x is rational number, $L(x)$ mean that x is real number.

Every rational number is a real number: $\forall x(D(x) \rightarrow L(x))$

There is a rational number: $\exists x D(x)$

Therefore, there is a real number: $\exists x L(x)$

The argument can be written as the follow wff:

$\forall x(D(x) \rightarrow L(x)) \wedge \exists x D(x) \rightarrow \exists x L(x)$.

1.	$\forall x(D(x) \rightarrow L(x))$	P
2.	$\exists x D(x)$	P
3.	$D(b)$	2, EI
4.	$D(b) \rightarrow L(d)$	1, UI
5.	$L(d)$	4, MP
6.	$\exists x L(x)$	5, EG
	QED	1, 2, 6, CP

Section 7.3, problem 8.e Transform each informal argument into a formalized wff. Then give a formal proof of the wff.

Some freshmen like all sophomores. No freshman likes any junior.

Therefore, no sophomore is a junior.

Answer:

Let $F(x)$ mean that x is freshmen, $S(x)$ mean that x is sophomore,

$J(x)$ mean that x is junior, and $L(x,y)$ mean that x likes y .

A: Some freshmen like all sophomores: $\exists x (F(x) \wedge \forall y (S(y) \rightarrow L(x,y)))$

No freshman likes any junior: $\forall x (F(x) \rightarrow \forall y (J(y) \rightarrow \neg L(x,y)))$

B: Therefore, no sophomore is a junior: $\forall x (S(x) \rightarrow \neg J(x))$

Then the argument can be formalized as $A \rightarrow B$, where

$\exists x (F(x) \wedge \forall y (S(y) \rightarrow L(x,y))) \wedge \forall x (F(x) \rightarrow \forall y (J(y) \rightarrow \neg L(x,y)))$
 $\rightarrow \forall x (S(x) \rightarrow \neg J(x)).$
